## Section 16

# Science and Technology

---

This section presents statistics on scientific, engineering, and technological resources, with emphasis on patterns of research and development (R&D) funding and on scientific, engineering, and technical personnel; education; and employment. Also included are statistics on space program outlays and accomplishments. Principal sources of these data are the National Science Foundation (NSF) and the National Aeronautics and Space Administration (NASA).

NSF gathers data chiefly through recurring surveys. Current NSF publications containing data on funds for research and development and on scientific and engineering personnel include detailed statistical tables; issue briefs; and annual, biennial, triennial, and special reports. Titles or the areas of coverage of these reports include the following: *Science and Engineering Indicators*; *National Patterns of R&D Resources*; *Women, Minorities, and Persons with Disabilities in Science and Engineering*—science and technology data presented in chart and tabular form in a pocket-sized publication—*Federal Funds for Research and Development*; *Federal R&D Funding by Budget Function*; *Federal Support to Universities, Colleges, and Selected Nonprofit Institutions*; *Research and Development in Industry*; R&D expenditures and graduate enrollment and support in academic science and engineering; and characteristics of doctoral scientists and engineers and of recent graduates in the United States. Statistical surveys in these areas pose problems of concept and definition and the data should therefore be regarded as broad estimates rather than precise, quantitative statements. See sources for methodological and technical details.

The National Science Board's biennial *Science and Engineering Indicators* contains data and analysis of international and domestic science and technology, including measures of inputs and outputs.

The *Budget of the United States Government*, published by the U.S. Office of Management and Budget, contains summary financial data on federal R&D programs.

### **Research and development outlays—**

NSF defines research as “systematic study directed toward fuller scientific knowledge of the subject studied” and development as “the systematic use of scientific knowledge directed toward the production of useful materials, devices, systems, or methods, including design and development of prototypes and processes.”

National coverage of R&D expenditures is developed primarily from periodic surveys in four principal economic sectors: (1) *Government*, made up primarily of federal executive agencies; (2) *industry*, consisting of manufacturing and nonmanufacturing firms and the federally funded research and development centers (FFRDCs) they administer; (3) *universities and colleges*, composed of universities, colleges, and their affiliated institutions, agricultural experiment stations, and associated schools of agriculture and of medicine, and FFRDCs administered by educational institutions; and (4) *other nonprofit institutions*, consisting of such organizations as private philanthropic foundations, nonprofit research institutes, voluntary health agencies, and FFRDCs administered by nonprofit organizations.

The R&D funds reported consist of current operating costs, including planning and administration costs, except as otherwise noted. They exclude funds for routine testing, mapping and surveying, collection of general-purpose data, dissemination of scientific information, and training of scientific personnel.

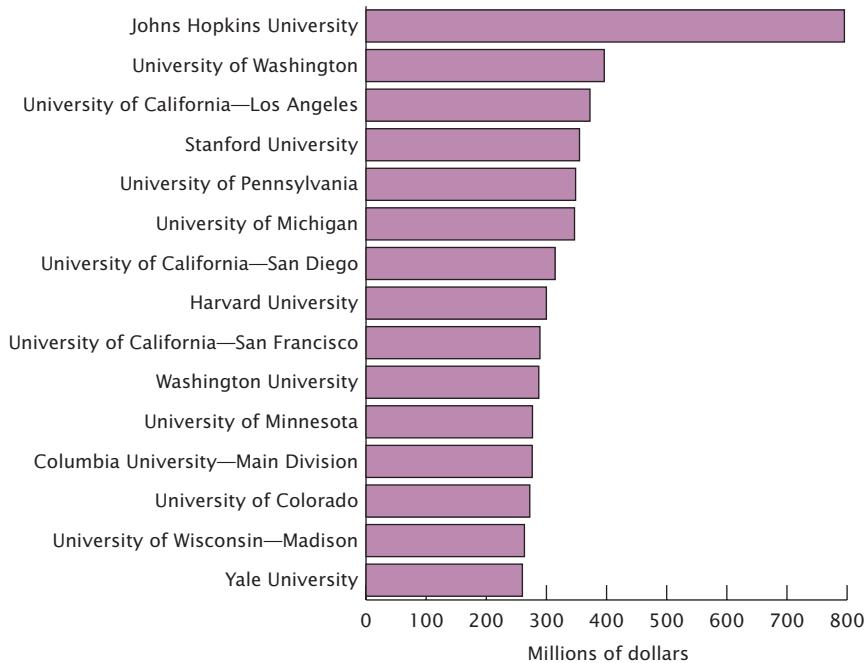

### **Scientists, engineers, and technicians—**

Scientists and engineers are defined as persons engaged in scientific and engineering work at a level requiring a knowledge of sciences equivalent at least to that acquired through completion

of a 4-year college course. Technicians are defined as persons engaged in technical work at a level requiring knowledge acquired through a technical institute,

junior college, or other type of training less extensive than 4-year college training. Craftsmen and skilled workers are excluded.

## No. 774. U.S. Commercial Space Industry Revenue by Type: 1996 to 2001

[In billions of dollars (19.6 represents \$19,600,000,000). For calendar years]

Industry	1996	1997	1998	1999	2000	2001, est.
Revenue, total . . . . .	19.6	26.7	30.5	31.9	36.9	36.5
Satellite manufacturing <sup>1</sup> . . . . .	7.3	10.3	11.8	10.0	8.9	5.5
Launch industry . . . . .	3.2	3.6	3.5	3.5	4.1	1.7
Satellite services <sup>2</sup> . . . . .	4.8	6.3	7.4	9.8	11.8	15.9
Ground equipment manufacturing <sup>3</sup> . . . . .	4.3	6.5	7.8	8.6	12.1	13.4

See footnotes for corresponding objects in Table 775.

## No. 775. Worldwide Commercial Space Industry Revenue by Type: 1996 to 2001

[In billions of dollars (44.8 represents \$44,800,000,000). For calendar years]

Industry	1996	1997	1998	1999	2000	2001, est.
<b>Total</b> . . . . .	<b>44.8</b>	<b>57.5</b>	<b>63.8</b>	<b>68.0</b>	<b>82.6</b>	<b>85.1</b>
Satellite manufacturing <sup>1</sup> . . . . .	12.4	15.9	18.5	15.8	17.2	14.1
Launch industry <sup>2</sup> . . . . .	6.9	7.9	7.0	6.6	8.5	5.0
Satellite services <sup>2</sup> . . . . .	15.8	21.2	24.4	29.7	39.2	46.4
Ground equipment manufacturing <sup>3</sup> . . . . .	9.7	12.5	13.9	16.0	17.7	19.6

<sup>1</sup> Includes revenues from the construction and sale of satellites to both commercial and government. <sup>2</sup> Includes revenues derived from transponder leasing and subscription/retail services such as direct-to-home television and satellite mobile and data communications. <sup>3</sup> Includes revenues from the manufacture of gateways and satellite control stations, satellite news-gathering trucks, very small aperture terminals, direct-to-home television equipment and mobile satellite phones.
